

Maximize Your IRA Benefits with SolarEdge C&I Products

1. U.S. Manufacturing for SolarEdge

SolarEdge has opened new production facilities in Austin, Texas and Tampa, Florida. We're proud to invest in American jobs and local economies.

2. Domestic Content Bonus for SolarEdge Products

The product configuration qualifies under the Rooftop (MLPE) category of the Safe Harbor Table. **Orders are open now for early 2025 fulfillment.** By Q2 2025, our Three Phase DC-optimized inverter system will be eligible for 35.6% Domestic Content, per (IRS Notice 2024-41).^{*} These products are intended to be eligible towards Domestic Content for the enhanced Federal Income Tax Credit.

3. Products that Comply with IRA Domestic Content Requirements

SolarEdge domestically produced products comply with the IRA's requirements. Starting in 2024, only 40% Domestic Content is needed to qualify. A simple way to capture the full incentive is to pair a SolarEdge Domestic Content inverter and optimizer system with a domestically produced racking system, and domestic or imported solar modules.

4. Achieve Compliance with SolarEdge + Racking Solutions

/ In early Q2 2025, paired with our C&I Domestic Content products (35.6%), customers would only need domestically manufactured rails (8.6%) to potentially achieve 44.2% and qualify for the tax credit.

/ They could also pair SolarEdge solutions with full racking towards an eligibility of 61.4%.^{*}

/ Products with qualifying Domestic Content have a small premium of 2.5-3 cents per Watt.

5. Eligible Products for Commercial Rooftop Projects

Domestic Content product lineup includes:

/ SolarEdge Three Phase Inverters

/ SolarEdge Three Phase Inverters with Synergy Technology

/ Power Optimizers

Available in 208V and 480V configurations

These products can help you meet compliance requirements and maximize your tax incentives.

6. Total Project Savings

SolarEdge's DC-optimized systems deliver significant savings:

/ For a 60kW system at 208V: Estimated savings of \$10,000

/ For a 1.5MW system at 480V: Estimated savings of \$250,000

Thanks to the Domestic Content Tax Credit and Balance of System (BoS) savings, you can expect total project savings of around **\$0.17 per Watt**. Customers typically save up to 50% on BoS costs with SolarEdge's DC-optimized solution, compared to string inverter systems.

^{*}SolarEdge does not provide tax and/or legal advice. Customers should consult with their own legal and/or tax advisor(s) regarding the eligibility of their project for the ITC or PTC, including the 10% Domestic Content bonus, to determine how the applicable rules apply to a particular project.
